

These instructions are outdated, they **MIGHT NEED** an update. In the meantime, install Batocera on a USB pen drive.

## Install Ubuntu

Follow the USUAL Ubuntu instructions.

## Batocera partitions

Create 2 consecutive partitions on your hard drive

- partition 1 : type = fat32, name = BATOCERA
- partition 2 : type = ext4. It must be created just after the BATOCERA partition.
- download [boot.tar.xz](https://github.com/BatoceraLinux/boot.tar.xz) and unzip it on the BATOCERA partition.

## Configure the Ubuntu grub

**Fix Me!**

- This part might not work with recent Ubuntu releases. Please report successes/failures on our forum or Discord channel.

```
$ sudo wget https://batocera.org/upgrades/grub/15_batocera -O
/etc/grub.d/15_batocera
$ sudo chmod a+x /etc/grub.d/15_batocera
$ sudo update-grub
...
Image batocera found on 9A01-4A3B
...
```

Reboot.
