EmulationStation

All things EmulationStation! This is the frontend that Batocera uses, basically what you would call its “menu”.

For an introduction to EmulationStation and how its navigated:

- Main Menu/EmulationStation overview

Batocera also features a special version of Kodi accessible from within EmulationStation:

- Kodi Media Center

And here's the major features that are supported via EmulationStation:

- RetroAchievements
- Shaders set
- Decorations (and The Bezel Project)
- Run-ahead input-lag reduction
- AI game translation
- Themes for EmulationStation
- Music for EmulationStation
- Netplay
- Web Server
