

Kodi Media Center

If you haven't heard already, **Kodi** is available with **Batocera**. It's been preinstalled and configured for controller support.

What is Kodi?

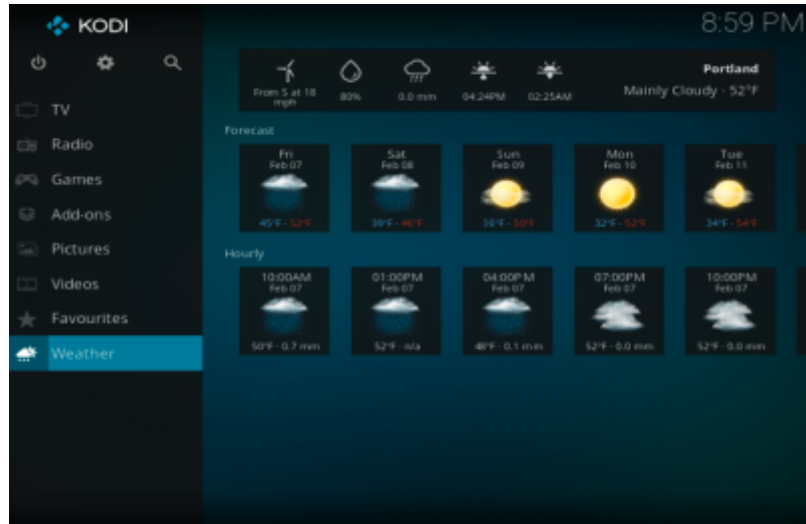

Kodi is a free and open-source media player software application developed by the XBMC Foundation, a non-profit technology consortium. Kodi is available for multiple operating systems and hardware platforms, with a software 10-foot user interface for use with televisions and remote controls or gamepads. It allows users to play and view most streaming media, such as videos, music, podcasts, and videos from the Internet. It supports all common digital media files from local and network storage media.

Enable and use Kodi

To launch **Kodi**, please follow the steps below.

- Make sure Kodi is enabled in the **SYSTEM SETTINGS** → **KODI SETTINGS** menu
- From this menu, you can associate Kodi to the X button, or enable it at Batocera start.
- Then, when enabled and depending on the configuration options, you can launch Kodi with the X button, or the first entry in the main menu when you press the start button on your controller.
- Once you are in the Kodi interface, to exit and get back to Batocera's game menu, you can press select and click on the **on/off** icon in the top left corner of the screenshot below, and select **exit** from this menu.

Netflix

If you have a Netflix account, you can use Kodi to watch Netflix shows. However, by default, you'll need to enter your Netflix credentials on each reboot. The reason is, by default, Batocera Linux creates a unique `machine-id` on every boot, and if the Kodi Netflix plugin sees a new `machine-id`, it requires you to log in again.

Workaround to force always the same `machine-id`:

1. Log [through SSH](#) on your Batocera machine.
2. Save permanently your current `machine-id` with the following commands:

```
# cat /var/lib/dbus/machine-id > /userdata/system/machine-id
# ln -sf /userdata/system/machine-id /var/lib/dbus/machine-id
# batocera-save-overlay
```

3. Now, your UUID is saved in `/userdata/system/machine-id` and will not change on each reboot, and Netflix shouldn't ask for your credentials every time.

Caveat: you have to recreate the symbolic link and [save the overlay after each Batocera upgrade/downgrade](#).

Troubleshoot Kodi

Here is a page explaining [what to do if you can't access your network from Kodi](#).

Fix internet access for Kodi

To fix internet access for Kodi on Batocera.linux there is a very simple thing to do !

Go to your

Settings/Services -> SMB client

And change its two parameters

Minimum protocol version :
Maximum protocol version :

By

Minimum protocol version : SMBv2
Maximum protocol version : SMBv3

Minimum protocol version

Set the minimum SMB protocol version to negotiate when making connections. Forcing SMBv2 may be required to prevent SMBv1 use on some OS. Please be aware, that we do not recommend to use SMBv1 at all for security reasons as it's known vulnerable. So please enable SMBv1 only if you know what you are doing.

Maximum protocol version

Set the maximum SMB protocol version to negotiate when making connections. Forcing SMBv2 or SMBv1 compatibility may be *required with older NAS and Windows shares. Please make sure if the SMB server you want to connect to supports at least SMBv2 and do required changes on the server side (and also for the shares) before enabling SMBv1.*

Specific cases Some NAS vendors support only older versions of SMB. Known examples are:

- Freebox Revolution: set Minimum protocol version to SMBv1.
- Orange Livebox 2019: set Minimum protocol version to SMBv1.
