

Random Video Screensaver settings

- **Swap video after**  indicates the time in seconds before switching to the next video when the screensaver takes over
- **Show game info on screensaver** - you can have an overlay of the game title and platform that runs either **always**, or only at **the beginning and the end** of the video, or **never**
- **Use marquee as Game Info**  if you scraped the game marquees and prefer to display a graphic image rather than plain text
- **Decorations** - do you want to add a bezel to the screensaver video snapshot? You can select between the default bezel for the system showed in the snap, a random bezel, or none.
- **Stretch video on screensaver** 
- **Mute video audio** 
- **Use custom videos**  enable this option if you want to play custom videos from a folder, rather than your scraped video snaps
- **Custom video dir** path where custom videos will be fetched - by default /userdata/screenshots but /userdata/splash is a good option too
- **Custom video dir recursive** in case you want to search for video files in subfolders of the previous path
- **Custom video filter** extensions for videos - by default .mp4, .avi
