Atom

The Atom is a computer developed by Acorn Computers. It was released in 1979.

This system scrapes metadata for the “atom” group(s) and loads the atom set from the currently selected theme, if available.

Place your Atom ROMs in /userdata/roms/atom.

Requires MAME BIOS file atom.zip Using software list mode is recommended. Software list cassettes don't work but floppies do. Disks will automatically show contents, if the program isn't auto-launched, type the program name followed by a double quote (mapped to shift-2) and hit enter to run.

Emulators

RetroArch

[RetroArch](#) (formerly SSNES), is a ubiquitous frontend that can run multiple “cores”, which are

essentially the emulators themselves. The most common cores use the [libretro](#) API, so that's why cores run in RetroArch in Batocera are referred to as "libretro: (core name)". RetroArch aims to unify the feature set of all libretro cores and offer a universal, familiar interface independent of platform.

RetroArch configuration

RetroArch offers a **Quick Menu** accessed by pressing [HOTKEY] +  which can be used to alter various things like [RetroArch and core options](#), and [controller mapping](#). Most RetroArch related settings can be altered from Batocera's EmulationStation.

Standardized features available to all libretro cores: atom.videomode, atom.videomode, atom.ratio, atom.shader, atom.smooth, atom.integerscale, atom.bezel, atom.bezel_stretch, atom.hud, atom.bezel.tattoo, atom.bezel.tattoo_corner, atom.bezel.tattoo_file, atom.bezel.resize_tattoo, atom.ai_service_enabled, atom.ai_target_lang, atom.ai_service_url, atom.ai_service_pause, atom.runahead, atom.secondinstance, atom.video_frame_delay_auto, atom.vrr_runloop_enable, atom.video_threaded

MAME

[MAME](#), the Multiple Arcade Machine Emulator, is a multi-purpose emulation framework which facilitates the emulation of vintage hardware and software. Originally targeting vintage arcade machines, MAME has since absorbed the sister-project [MESS](#) (Multi Emulator Super System) to support a wide variety of vintage computers, video game consoles and calculators as well. MAME doesn't use an individual "core" for each system like RetroArch does, instead the ROM itself usually contains the necessary information to accurately emulate it, thus making it specific to the version of MAME it was made for. Overall it's a very complicated subject, we have a [guide specific to arcade](#) just for it.

MAME configuration

MAME offers a [Menu](#) in-game ([HOTKEY] +  or [Tab] on the keyboard). This can be used to manually adjust inputs or game settings. If you're having issues with a specific game, check the

[MAMEdev FAQ for that game here](#). For MESS systems specifically, you might find more information on [MESS's wiki](#). All options can also be edited by opening the `mame.ini` file.

Standardized features available to all versions of this emulator: `xegs.videomode`, `xegs.padtokeyboard`, `xegs.videomode`, `xegs.bezel`, `xegs.bezel_stretch`, `xegs.hud`, `xegs.bezel.tattoo`, `xegs.bezel.tattoo_corner`, `xegs.bezel.tattoo_file`, `xegs.bezel.resize_tattoo`
