ECWolf

ECWolf is a port of the Velfenst in 30 engine based of Wolf4SDL. It combines the original Molfenstein 3D engine with the user experience of ZDoom to create the most user and mod author friendly Wolf3D sturcture.

Quote from https://bitbucket

/master/README.md

ECWolf was constructed with Git forms API in mind, so their command syntax/configuration appear to be very similar, but cross-compatibility should not be assumed or expected. There will usually be specific commands/configs required for each system that corrupt/are incompatible with the other, resulting in issues.

This system scrapes metadata for the "ecwolf" group(s) and loads the ecwolf set from the currently selected theme, if available.

Grouped with the "ports" group of systems.

Quick reference

• Emulator: ecwolf

• Folder: /userdata/roms/ecwolf

Savegames: /userdata/saves/ecwolf/[romname]/
 Accepted ROM formats: .ecwolf, .pk3, .squashfs

BIOS

No ECWolf emulator in Batocera needs a BIOS file to run.

ROMs

Install to roms/ecwolf/. The ecwolf binary offers same supports as the original DOS executables (wolf3d.exe, spear.exe, etc.). Thus these executables are not needed - all supplementary data-files that were included with the original installation should be copied.

1.x mods may not be compatible with 2.x, and vice versa. The philosophy on backwards mod compatibility going forward is TBA.

GOG: Wolfenstein 3D + Spear of Destiny

Steam: Wolf Pack

• Steam: Super 3D Noah's Ark

3d Realms

 - Spear of Destiny Demo filedownload

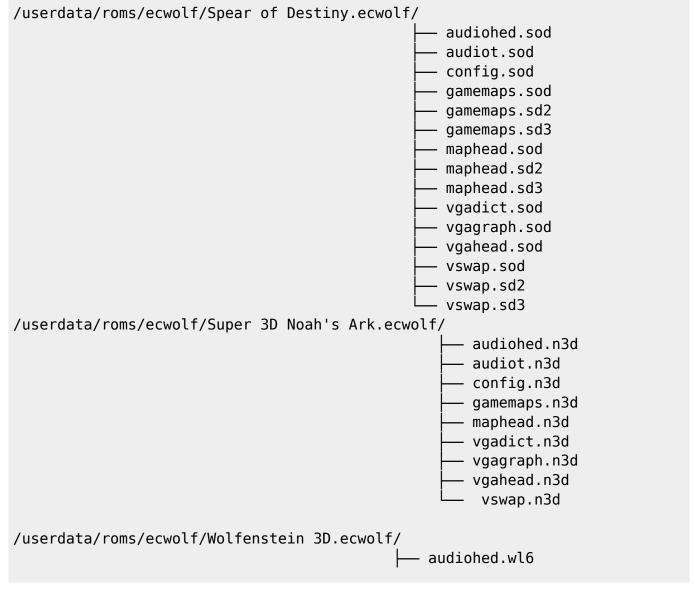

How to install games

Put the game's folder in the /roms/ecwolf and add the extension .ecwolf and inside that, copy the appropriate files:

- .wl6 (Wolfenstein 3D fullversion)
- .wl1 (Wolfenstein 3D demo)
- . sod (Spear of Destiny fullversion)
- .sdm (Spear of Destiny demo)
- . sd2 (Spear of Destiny Mission Pack 2: Return to danger)
- . sd3 (Spear of Destiny Mission Pack 3: Ultimate Challenge)
- .n3d (Super Noah's Ark 3D)

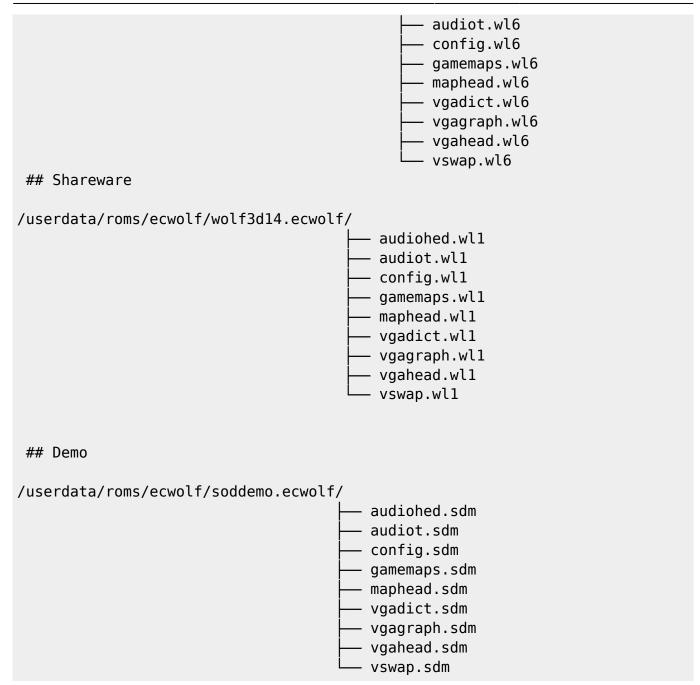

For example: /roms/ecwolf/Wolfenstein 3D.ecwolf/<.wl6 game files>

Mods

ECWolf can run total conversions, but only ones that have no significant changes in code.

- 1. Rename the mode files extension to one compatible with ECWolf: .wl6, .wl1 or .sod
- 2. Install the mod to a ROM.
- 3. Enjoy!

e.g.: for the MOD Conflict In The Fatherland (1999), rename the files from .bj2 to .wl6, add the game to /userdata/roms/ecworlf/Conflict In The Fatherland.ecwolf/, launch the game in Batocera, and select Wolfenstein 3D due to .wl6 be a extension be related to the base game Wolfenstein 3D. Enjoy your MOD!

Mods: https://beta.wolf3d.net/engines/ECWolf/games

Since Batocera 38 the support of .pk3 and .ecwolf files was added. These files are packages that contain new sound (guard shouts, weapon noise), background music (MP3 or even FLAC), textures (from simple new reskinned textures to HD), weapons (yes B.J. can carry even more than 4 pieces) and of course completly new levelsets.

A good collection of a HD total conversion and nice music/audio-sets can found here (ZDOOM forum). Download the linked pk3 files.

As said the support of .ecwolf was added since Batocera 38, as an example how these files are used

- Create a file Wolfenstein 3D HD.ecwolf
- Use a single line of arguments inside the file
- First argument: a path relative to ecwolf-rom dir
- Second argument: according ecwolf —help pages
- ...

Wolfenstein 3D - Spear of Destiny - Mission Pack2: Return to Danger.ecwolf

.\wolf3d14 --data sd2

Please do not use whitespaces within the pathes. The script generator uses every whitespace as it's own argument!

You can also try to load .pk3-files direc within Emulationstation. Just copy the files next to your gameset. Remeber that this method allows only the loading of single files. The .ecwolf-file method is the recommended way to use mods but needs some editing. The box down is the full help page, ecwolf offers. So you can also use your own config files for some special devices if needed for example.

ecwolf -help

```
[root@BATOCERA /etc/default]# ecwolf --help
ReadConfig: Reading the Configuration.
IWad: Selecting base game data.
ECWolf 1.4.1 (<unknown version>)
http://maniacsvault.net/ecwolf/
Based on Wolf4SDL v1.7

Joins a network game coordinated by the given host. --join <address> Port number to use for network communications. --port <number> Player vs. player battle --battle --debugnet Enable network debugging messages. --foreignsave Disable save game validity checking.

Compatbility

Supported:

- Wolfenstein 3D
- Spear of Destiny
- Spear of Destiny Mission Pack 2 & 3

• Super Noah's Ark 3D

Mods:

- Super Noah's Ark 3D
- Wolfenstein 3D + Spear of Destiny

Unsuported (currently):

- Corridor 7- Alien Invasion
- Operation Body Count

Emulators

ECWolf

ECWolf configuration

Standardized features available to all cores of this emulator: ecwolf.videomode, ecwolf.padtokeyboard

Controls

Here are the default ECWolf's controls shown on a Batocera Retropad:
