Sega Lindbergh

The Sega Lindbergh is an arcade developed by Sega. It was launched in 2005. Designed to be the successor to the Sega NAOMI 2, Lindbergh is the first arcade machine of many to be based on PC architecture with linux OS instead of a home console based on Xbox 360. Features arcade games like After Burner Climax, House of the Dead 4 and OutRun 2 SP SDX.

Five variants were made, each with their own color: Yellow, Red, Red EX, Blue and Silver. For more information about this arcade machines, the article on Sega Retro provides much of it.

This system scrapes metadata for the “lindbergh” and “arcade” groups and loads the `lindbergh` set from the currently selected theme, if available.

Quick reference

- **Emulator:** Sega Lindbergh loader
- **Folder:** `/userdata/roms/lindbergh`
- **Accepted ROM formats:** `.game`

BIOS

No Sega Lindbergh emulator in Batocera needs a BIOS file to run.

ROMs

Place your Sega Lindbergh ROMs in `/userdata/roms/lindbergh`. For Batocera to detect a game, you must have a blank file with '.game' extension in the location where the rom will execute from. For

best compatibility, use game ID from the working games list below as the file name.

i.e.: for Ghost Squad Evolution game, create `ghostev.game` in the `/userdata/roms/lindbergh/Ghost Squad Evolution/vsg_l` directory.

Some games (mostly driving) require extra options in the test menu. You can skip it by making sure your game has the **exact same revision** (e.g.: `initiad5exa.game` if you have `Initial D 5 (Export) (2.0)`) as mentionned in the game list below.

Emulators

Sega Lindbergh loader

With batocera.linux 42, the Lindbergh system is supported. It includes guns and wheels (without force feedback) support.

Games list

Name	Executable file	Revision	ID	Genre	Working ?	Notes
2 Spicy	apacheM.elf		2spicy	Gun	✔	D-pad on light guns for left/right
