NEC PC-6000

The PC-6000 series is a series of 8-bit home computers introduced in November 1981 by NEC Home Electronics. There are several models in this series, such as the PC-6001, the PC-6001 MK2 and the PC-6001 MK2 SR. There is also an American version, called the NEC TREK or NEC PC-6001A.

This system scrapes metadata for the “pc60” group and loads the `pc60` set from the currently selected theme, if available.

Quick reference

- **Emulator:** MAME
- **Folder:** `/userdata/roms/pc60`
- **Accepted ROM formats:** `.zip`

BIOS

Needs MAME BIOS pc6001.zip.

ROMs

Place your NEC PC-6000 ROMs in `/userdata/roms/pc60`.

Emulators

MAME

MAME, the Multiple Arcade Machine Emulator, is a multi-purpose emulation framework which facilitates the emulation of vintage hardware and software. Originally targeting vintage arcade machines, MAME has since absorbed the sister-project MESS (Multi Emulator Super System) to support a wide variety of vintage computers, video game consoles and calculators as well. MAME doesn't use an individual “core” for each system like RetroArch does, instead the ROM itself usually contains the necessary information to accurately emulate it, thus making it specific to the version of MAME it was made for. Overall it's a very complicated subject, we have a guide specific to arcade just for it.

Controls

Here are the default NEC PC-6000's controls shown on a Batocera RetroPad:
