Plug 'n' Play TV Games

A system to represent all the various “TV Games” out there. These little machines were self-contained devices that, as the name implies, you plug into your TV and start playing. The device itself was usually the controller, but not always. Here's a cool video about them.

One of the more prolific manufacturers of them was Jakks Pacific, of which a community created wiki has some examples of.

Due to their self-contained nature, they're usually only emulatable by highly specialized emulation software. It's no surprise that it's handled by MAME.

This system scrapes metadata for the “tvgames” group and loads the plugnplay set from the currently selected theme, if available.

Quick reference

- **Emulator:** MAME
- **Folder:** /userdata/roms/plugnplay
- **Accepted ROM formats:** .zip, .7z

BIOS

No TV Games emulator in Batocera needs a BIOS file to run.

ROMs

Place your TV Game ROMs in /userdata/roms/plugnplay.

Emulators

MAME

MAME, the Multiple Arcade Machine Emulator, is a multi-purpose emulation framework which facilitates the emulation of vintage hardware and software. Originally targeting vintage arcade machines, MAME has since absorbed the sister-project MESS (Multi Emulator Super System) to support a wide variety of vintage computers, video game consoles and calculators as well. MAME doesn't use an individual “core” for each system like RetroArch does, instead the ROM itself usually

contains the necessary information to accurately emulate it, thus making it specific to the version of MAME it was made for. Overall it's a very complicated subject, we have a guide specific to arcade just for it.

**MAME configuration**

MAME offers a **Menu** in-game ([HOTKEY] + 🎥 or [Tab] on the keyboard). This can be used to manually adjust inputs or game settings. If you're having issues with a specific game, check the MAMEdev FAQ for that game here. For MESS systems specifically, you might find more information on MESS's wiki. All options can also be edited by opening the mame.ini file.

Standardized features available to all versions of this emulator: plugnplay.videomode, plugnplay.decoration, plugnplay.padtokeyboard

<table>
<thead>
<tr>
<th>ES setting name</th>
<th>Description ⇒ ES option key_value</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>GRAPHICS BACKEND</strong> plugnplay.video</td>
<td>Choose your graphics rendering ⇒ BGFX bgfx, Accel accel, OpenGL opengl.</td>
</tr>
<tr>
<td><strong>BGFX BACKEND</strong> plugnplay.bgfxbackend</td>
<td>Choose your graphics API ⇒ MAME Detect automatic, OpenGL opengl, OpenGL ES gles, Vulkan vulkan.</td>

<tr>
<td><strong>CRT SWITCHRES</strong> plugnplay.switchres</td>
<td>CRT monitor SwitchRes support ⇒ Off 0, On 1.</td>
</tr>
<tr>
<td><strong>TATE MODE</strong> plugnplay.rotation</td>
<td>Rotating display to vertical mode rendering ⇒ Off None, Rotate 90 autoror, Rotate 270 autorol.</td>
</tr>
<tr>
<td><strong>ALT DPAD MODE</strong> plugnplay.altdpad</td>
<td>If the D-Pad does not work properly ⇒ Off (Default) 0, DS3 Orientation 1, X360 Orientation 2.</td>
</tr>
</tbody>
</table>

**Controls**

The TV Game's controls were usually specific to the game itself. In general, the way MAME handles this is by simply numbering the buttons, incrementing them as needed, up to six standard buttons and a directional stick.

Here are the default TV Games's controls shown on a Batocera Retropad:
Troubleshooting

Further troubleshooting

Most questions are answered in the generic arcade guide.

For further troubleshooting, refer to the generic support pages.
