Emulators

RetroArch

[RetroArch](#) (formerly SSNES), is a ubiquitous frontend that can run multiple "cores", which are essentially the emulators themselves. The most common cores use the [libretro](#) API, so that's why cores run in RetroArch in Batocera are referred to as "libretro: (core name)". RetroArch aims to unify the feature set of all libretro cores and offer a universal, familiar interface independent of platform.

RetroArch configuration

RetroArch offers a **Quick Menu** accessed by pressing [HOTKEY] +  which can be used to alter various things like [RetroArch and core options](#), and [controller mapping](#). Most RetroArch related

settings can be altered from Batocera's EmulationStation.

Standardized features available to all libretro cores: `supracan.videomode`, `supracan.videomode`, `supracan.ratio`, `supracan.shaderset`, `supracan.smooth`, `supracan.integerscale`, `supracan.bezel`, `supracan.bezel_stretch`, `supracan.hud`, `supracan.bezel.tattoo`, `supracan.bezel.tattoo_corner`, `supracan.bezel.tattoo_file`, `supracan.bezel.resize_tattoo`, `supracan.ai_service_enabled`, `supracan.ai_target_lang`, `supracan.ai_service_url`, `supracan.ai_service_pause`, `supracan.runahead`, `supracan.secondinstance`, `supracan.video_frame_delay_auto`, `supracan.vrr_runloop_enable`, `supracan.video_threaded`

MAME

[MAME](#), the Multiple Arcade Machine Emulator, is a multi-purpose emulation framework which facilitates the emulation of vintage hardware and software. Originally targeting vintage arcade machines, MAME now also supports a wide variety of vintage computers, video game consoles and calculators. MAME doesn't use an individual "core" for each system like RetroArch does, instead the ROM itself usually contains the necessary information to accurately emulate it, thus making it specific to the version of MAME it was made for. Overall it's a very complicated subject, we have a [guide specific to arcade](#) just for it.

MAME configuration

MAME offers a **Menu** in-game ([HOTKEY] +  or [Tab] on the keyboard). This can be used to manually adjust inputs or game settings. If you're having issues with a specific game, check the [MAMEdev FAQ for that game here](#). All options can also be edited by opening the mame.ini file.

Standardized features available to all versions of this emulator: supracan.videomode, supracan.padtokeyboard, supracan.videomode, supracan.bezel, supracan.bezel_stretch, supracan.hud, supracan.bezel.tattoo, supracan.bezel.tattoo_corner, supracan.bezel.tattoo_file, supracan.bezel.resize_tattoo
