

# EmulationStation Themes

 Page is WIP

A selection of Batocera-compatible themes can be installed through the menu **UPDATES & DOWNLOADS** → **THEMES**. This gives you the option to select a and set a new theme for your system.

Compatibility issues for themes are not unheard of, so be sure to make sure there are no reported issues on the theme you're applying.

Starting with Batocera.linux 5.24, most EmulationStation for RetroPie and Recalbox are compatible. But [some features are unique to Batocera](#) and require a theme that has been designed for Batocera.

This menu gives you a list of themes available like:

In the screenshot above you can see which new themes can be downloaded, and which themes are available for an upgrade, based on their icons.

## Batocera Themes List

Theme	Author	System List View	ROM List View	ROM Grid View
Carbon (default)	fabricecaruso			
Alekfull NX	fagnerpc			

Theme	Author	System List View	ROM List View	ROM Grid View
Art-Book	anthonycaccese			
Artflix	fagnerpc			
Batocera Club Reloaded	Snakervill + Hel Mic			
Ckau-Book	CkauNui			
ComicScrap	Hel Mic			
DragonBall TMCTV	TMCTV

## Script for Screenshots

This script works for Rasperr Pi only.

[pishoot.sh](#)

```
#!/bin/bash
res_height=1080
res_width=1920
saveplace="$HOME"
compression=6          #level from 0 to 9

mkdir -p "$saveplace"

read -p "Enter name of theme now: " theme_name
```

```
[[ -z $theme_name ]] && echo "Not nice ..." && exit
theme_name="${theme_name,,}" #force lowercase
cat << _EOF_
```

We create 3 files now

1. `${theme_name}_system` -> For main system view
2. `${theme_name}_list` -> For the ROMs list menu
3. `${theme_name}_grid` -> For the ROMs grid view

These Pictures will be saved into directory

`$saveplace`

Select the view for ES (system, list and grid)

So press ENTER to create the pictures.

\_EOF\_

```
for i in system list grid; do
    read -p "If you are ready then press ENTER for screenshot:
${theme_name}_${i}.png"
    raspi2png -p "${saveplace}/${theme_name}_${i}.png" -d 1 -h
$res_height -w $res_width -c $compression
done
```

## BATOCERA Themes - removed

## Using batocera-es-theme

batocera-es-theme - downloads and installs EmulationStation themes for Batocera

It accepts two modes: 'list' and 'install <theme>'

- 'list' for the list of themes available online, and if they are [A]vailable to install, [I]nstalled or [?]unknown.
- 'install <theme>' to install the theme, from its theme name.
- 'remove <theme>' to delete an installed theme.

If you have a local /userdata/system/themes.txt file, it will override the one hosted on Batocera website.

```
[root@BATOCERA /userdata/system]# batocera-es-theme
```

batocera-es-theme - downloads and installs EmulationStation themes for Batocera

It accepts two modes: 'list' and 'install <theme>'

- 'list' for the list of themes available online, and if they are [A]vailable to install, [I]nstalled or [?]unknown.
- 'install <theme>' to install the theme, from its theme name.
- 'remove <theme>' to delete an installed theme.

If you have a local /userdata/system/themes.txt file, it will override the one hosted on Batocera website.
